Preparing for your Leukoscan

What is a 'Leukoscan'?

In Nuclear Medicine we use an injection of a small amount of radioactivity get more information about certain parts of your body. A 'Leukoscan' gives your doctor more information about your illness, which cannot be seen on other scans you may have had done. The injection travels into the blood stream and collects in a certain parts of the body. However, it will take at least 3 hours for the required amount to get there.

What will your scan involve?

Firstly, when you arrive at the department the whole procedure will be explained to you and any questions you will be answered. A radiographer will then give you an injection in a vein in the arm. This injection should have no side effects (such as making you sleepy). You can leave the department and return **3 hours** later. You will then be asked to lie on a bed and a special camera will be brought over the part of your body being examined, but will never touch you. The whole scan takes about 20-30mins.

Is there any preparation before this scan?

There is no preparation for this scan. You do not need to fast for this scan.

It may be necessary for you to stop taking some of your medication, the Nuclear Medicine department will contact you prior to your scan if needed.

What about after the scan?

After the scan you will be well enough to go home or back to work.

It is recommended that you minimise the time you spend in close contact (within 2 meters) with small children and pregnant women for the 24 hours following the injection, to avoid unnecessarily exposing them to very small amounts of radiation.

Please do not bring small children to the department with you, however, you are quite welcome to bring an adult companion to the department as long as they are definitely not pregnant or trying for a baby.

How much radiation will I get?

Firstly, it is very important to know that you will only receive a very small amount of radiation. We are all exposed to natural background radiation during our lives. The radiation dose from this scan is similar to that which you would receive from the environment over a period of 1-2 years. The benefits to you having this scan outweigh any possible radiation risks.

Do I need to bring anything with me?

Don't forget to bring your appointment card if your doctor gave you one. Although every effort is made to keep to the appointed times, unforeseeable events may cause delays and therefore a magazine/book may be useful. We do have to wait till you arrive before we can prepare the injection so please be patient and on time!

How soon will I get the results?

A doctor in Nuclear Medicine analyses your scan and writes a report, which is then sent to your doctor. Your doctor should then have the results within the next 7-10 days or else at the time of your next appointment.

When you come for your scan you will first need to go to the X-ray department.

LADIES

It is very important that we avoid carrying out this examination if you are pregnant or think you might be pregnant. If this is the case, please contact us in advance. When you arrive for your scan you will be asked for the date of the first day of your last period. If your period is overdue, your appointment date may be re-arranged.
